

Suzanne Janicki
BASF Environmental, The Chemical Company
North American GHS Project Manager

Suzanne Janicki is the North American GHS Project Manager for BASF, The Chemical Company. Suzanne joined The Dow Chemical Company in 1983 and held various R&D, Technical Service and Development and EHS positions with both domestic and international responsibilities. In 2005, Suzanne moved with her family to the heart of the mid-west joining Roquette America, Inc. to lead EHS transformational initiatives. In 2008, Suzanne joined BASF in Hannibal, MO as the EHS Team Leader managing various process safety and operational based EHS initiatives. She has been active in the Environmental, Health and Safety arena for over 20 years in both product stewardship roles and operation functional roles for a wide range of businesses including medical devices and biotechnology, automotive, agriculture, and building/construction materials.

Her current responsibilities at BASF focus on leading the implementation of GHS in North America which includes Canada, Caribbean, Central America, Mexico and United States. The project includes the entire product value chain from toxicological and product regulatory management through supply chain and customer communications management.

Over the course of her 30 year career, Suzanne has served as a member and provided expertise on task groups for leading industry associations including the Society of Plastics Engineers, American National Standards Institute, and National Security Agency's Round Table for Biomedical Devices. She has presented papers at a number of international conferences including, the SPE Annual Technical Conference (ANTEC), Process Safety Management for Chem/Petrochem & Refineries and a variety of Medical Device conferences. She published several papers on Medical Device Risk Management and Injection Molding. She received a BS Chemistry Degree from Michigan State University.
